

## iOBSERVATION OBSERVER QUALITY ASSURANCE MODULE

The resource you need to improve your team's scoring calibration.

### WHAT IT IS

This is an optional module of iObservation to help you calibrate, assess, and certify the accuracy of your observer. This module consists of a bank of master-scored videos for districts to proctor sessions with evaluators that will measure and analyze their observer accuracy. Our master scoring team, led by Dr. Robert Marzano, provides the correct answers. We also include a scoring rationale in this module for deeper understanding of the choices made by the master scoring team.

For best results, we recommend at least two calibration scoring sessions a year using this module to prevent scoring drift. For the purposes of observer certification, the answer key is secure, allowing your district to offer the same assessment multiple times. Your district, working collaboratively with Learning Sciences International, can set the accuracy scoring cutoffs to establish observer certification standards for the district.

### WHAT IT DOES FOR YOU

This module will help you improve your observer scoring calibration, and it will provide additional observer resources to support observers in improving their observation skills and accuracy levels.

### HOW IT WORKS

Your session manager can create a session using one of our video assessments. Your observers meet with the session manager, watch the classroom videos, and score the video using the district's observation rubric. The results will show areas of strength and areas that require further observer training.

### AUDIENCE

Observers

### REQUIREMENTS

All session managers are required to attend a one hour virtual tour that will cover session management and day of session facilitation with trouble shooting tips. Session managers will receive supporting documents to include Session Management Quick Start Guide and Participant Quick Start Guide.
